# ANKUR SHARMA

**AI-Native Engineering Leader | Software Engineering Manager | Developer Productivity & Quality Engineering**

Bengaluru, India | +91-9108673301 | ankur.sharma5102@gmail.com | linkedin.com/in/ankur-sharma-a1097456

## PROFESSIONAL SUMMARY

AI-Native engineering leader with 14+ years in software engineering and 5+ years leading globally distributed teams (36+ engineers, architects, and QA), currently driving the adoption of AI-assisted development, coding agents, and agentic workflows across the SDLC at Blue Yonder. Proven track record designing and scaling engineering experiments, defining AI-Native development, testing, and code-review standards, and establishing quality bars, guardrails, and playbooks that turn successful pilots into repeatable, organization-wide practice. Skilled at coaching engineers and engineering leaders through meaningful change, building balanced metrics frameworks to separate durable engineering value from short-lived hype, and partnering across engineering, QA, security, DevOps, and executive leadership in fully remote, cross-timezone (US/India) organizations. Deep hands-on foundation in distributed systems, microservices, Kubernetes, Kafka, and cloud-native architecture (AWS/Azure) delivering mission-critical platforms for regulated financial services (Morgan Stanley) and global supply chain/retail enterprises (Blue Yonder).

## CORE COMPETENCIES

- AI-Native Engineering: AI-assisted development & coding agents, agentic workflows, AI-enabled code review & test generation, GitHub Copilot & Claude adoption, prompt-driven development, responsible/secure AI usage guardrails
- Engineering Transformation: Experiment design & measurement, developer productivity, quality engineering, standards & playbooks, tool evaluation & rollout, change leadership, coaching & enablement
- Leadership & Talent: Engineering leadership, technical roadmap ownership, resource planning, hiring & talent development, career coaching, succession planning, cross-timezone (US/India) collaboration
- Architecture & Platform: Distributed systems, microservices, Java/J2EE, Python, Go, Kubernetes, Docker, Kafka, Redis, REST APIs, system design
- Cloud & Data: AWS (EC2, S3), Microsoft Azure (AZ-305 Certified), hybrid on-prem/SaaS infrastructure, CI/CD (Git/GitHub Actions), PostgreSQL, MySQL, Solr, SQL/NoSQL
- Quality & Reliability: Test automation, quality gates, incident bridge leadership, root cause analysis (RCA), high availability, disaster recovery, Agile/Scrum delivery, compliance standards

## PROFESSIONAL EXPERIENCE

**Engineering Manager, Platform Engineering & Enterprise Applications** *Dec 2023 – August 2026*

***Blue Yonder***

- Lead a high-performing, globally distributed team of 36+ developers, architects, and QA engineers, driving organization-wide adoption of AI-Native engineering practices — GitHub Copilot, Claude, and generative-AI-assisted workflows — across the development lifecycle for cloud-native supply chain platforms supporting multi-billion-dollar product movements.
- Define and institutionalize AI-Native development standards, usage guardrails, and best practices for AI-assisted coding, review, and delivery; coach engineers and engineering leaders on integrating coding agents and human-AI collaboration into daily workflows.
- Set technical direction and roadmap for enterprise-scale platform infrastructure across Azure and AWS, defining microservices boundaries and Kubernetes container-orchestration strategy while holding teams accountable to engineering quality bars.
- Diagnose delivery bottlenecks using first-principles, data-driven analysis, translating ambiguous cross-functional problems into actionable plans; own resource allocation, sustaining a 94%+ delivery success rate across sprint and release cycles.
- Drive DevOps and continuous-delivery practices via Git/GitHub Actions CI/CD pipelines across Azure-hosted, cloud, and on-prem environments, improving release reliability and developer experience.
- Lead incident bridges and root-cause analysis for production infrastructure, strengthening availability, performance, and resiliency for high-throughput, low-latency systems built on Kafka and Redis.
- Champion a customer-first, continuous-improvement culture as primary technical point of contact for application development partners, business stakeholders, and vendors.
- Grow engineers through structured coaching, job shadowing, goal-setting, and performance management; own hiring to build team capability aligned to AI-Native engineering objectives.

**Principal Consultant, Software Engineering Manager** *Aug 2021 – Dec 2023*

***Zen & Art (Client: Morgan Stanley)***

- Led engineering delivery for the Commodities Metrics Platform, establishing engineering standards and operating procedures for high-throughput data processing and resilient, event-driven microservices in a highly regulated banking environment.
- Hired, developed, and retained top engineering talent, fostering a high-energy, innovation-focused culture and coaching engineers through changes in tooling, workflows, and delivery practices.
- Designed and delivered secure, highly available enterprise services implementing authentication, authorization, and role-based access control (RBAC), aligned to enterprise security and compliance guardrails.
- Partnered with senior business stakeholders and architecture boards to translate business objectives into technical solutions and prioritized delivery roadmaps.
- Drove measurable engineering outcomes through process innovation and infrastructure modernization — improving platform performance by 95% and increasing business data visibility by 80% via search-indexing optimization.
- Directed end-to-end production support, incident resolution, and RCA processes, owning escalations from business and stakeholder groups.
- Recognized with the Rising Leader Award for technical leadership and delivery excellence.

**Technology Consultant, Engineering Lead** *Mar 2020 – Mar 2021*

***DXC Technology***

- Led application development delivery across multiple distributed Agile teams for enterprise business applications, coordinating end-to-end project lifecycle activities in a global consulting environment.
- Owned release planning, delivery governance, and tier-1 production support architecture, upholding tight platform SLAs.
- Supported cloud migration and infrastructure modernization initiatives, improving scalability and deployment efficiency.

**Consultant, Full Stack Engineer** *May 2018 – Feb 2020*

***Capgemini (Client: Mercedes-Benz R&D)***

- Designed and engineered high-scale web platforms using Java/J2EE, JavaScript, Angular, and RESTful microservices.
- Built and administered a role-based access control system governing distinct access tiers for HR, travel administration, and visa-applicant workflows.
- Maintained hands-on accountability for high-performance code and architecture reviews grounded in strong CS fundamentals, data structures, and algorithms.
- Received the Star Performer Award for engineering execution and technical strategy contributions.

**Senior Software Engineer** *Sep 2015 – May 2018*

***TechMinfy (2016–2018) & Accure Analytics (2015–2016)***

- Designed and developed backend enterprise services and RESTful APIs using Java and Spring Framework, with scalable data solutions on PostgreSQL, MySQL, and AWS (EC2, S3).
- Built secure backend systems implementing authentication, authorization, and RBAC; contributed to CI/CD and deployment automation, improving engineering efficiency and release reliability.

**Full Stack Software Engineer** *Jul 2012 – Aug 2015*

***Freelance***

- Designed, developed, and deployed a University Education Management System spanning student administration, academic workflows, and reporting analytics, using Java, Spring Framework, Node.js, Vue.js, and MySQL, owning the complete SDLC from requirements through production support.

## EDUCATION

Master of Business Administration (MBA) — Amity University, 2013–2015

Bachelor of Technology (B.Tech.), Electronics & Communication Engineering — Punjab Technical University, 2007–2011

## CERTIFICATIONS & AWARDS

- Microsoft Certified: Azure Solutions Architect Expert (AZ-305)
- Six Sigma Green Belt & Quality Management Systems — BSI Certified
- Rising Leader Award — Morgan Stanley engagement, for engineering leadership and delivery excellence
- Star Performer Award — Mercedes-Benz R&D program, for technical contributions and delivery excellence
